

## Technical Product Manager

### Job Summary

The Technical Product Manager (TPM) will coordinate DoD and commercial product development and contract management activities in a fast-paced, highly-technical R&D environment. The TPM will also support commercialization of NAVSYS' advanced PNT products and will work closely with strategic partners, customers, engineers, company management, vendors, and suppliers in order to communicate program-related direction and decisions. The TPM will also perform day-to-day project management on contracts to assure that milestones and deliverables are met on time and on budget.

### Job Description

1. Develops and maintains project plans and projections, coordinates the effective use of resources, manages deliverables, schedules, and costs.
2. Coordinates efforts of a diverse set of engineers on programs with hardware, firmware, software and modeling/simulation research expertise for the design, development, and maintenance of positioning, navigation, and timing systems. Orchestrates activities to develop new systems and enhance/extend existing systems to support customer needs.
3. Works with partners to identify, plan, and execute initiatives for development and marketing of new products for commercial and DoD applications.
4. Oversees the product development lifecycle including requirements generation, design, implementation, integration, and testing, both in our facilities as well as in the field, locally, and at customer operational testing sites.
5. Prepares customer briefings and supports customer product and field demonstrations.
6. Coordinates proposal development to include developing resource estimates, statements of work, milestone identification, deliverables, scheduling, and costing
7. Leads and participates in product-related process improvement initiatives.
8. Supervises the engineering team to assure on-schedule and on-budget project execution.

### Requirements

The successful candidate will possess the following knowledge, skills, and experience:

- Four +years project management experience with U.S. Government, DoD, and commercial contract and sub-contract program management including managing customer relationships, schedule, and budget management.
- Experience supervising technical/engineering teams
- Experience with the use of MS Project and Excel for project planning and execution and resource forecasting.
- Experience with generating technical and cost proposals.

This position requires a motivated self-starter and team-player with the ability to address diverse challenges in a complex environment – amongst these challenges are inter-program technology

dependencies and mid-program technology changes. Excellent organization and communication skills are a must. An ability to operate fluidly and efficiently and to motivate and monitor technical staff assigned in a matrix organization will contribute to the incumbent's success.

### **Citizenship, Education, and Security Clearance**

- Individuals with an active security clearance are preferred. US Citizenship is required. Candidates without active security clearance will be subject to a government security investigation and must meet eligibility requirements for access to classified information.
- BS degree or higher in Computer Science, Electrical Engineering or ten years relevant technical experience
